Provincia di Reggio Calabria

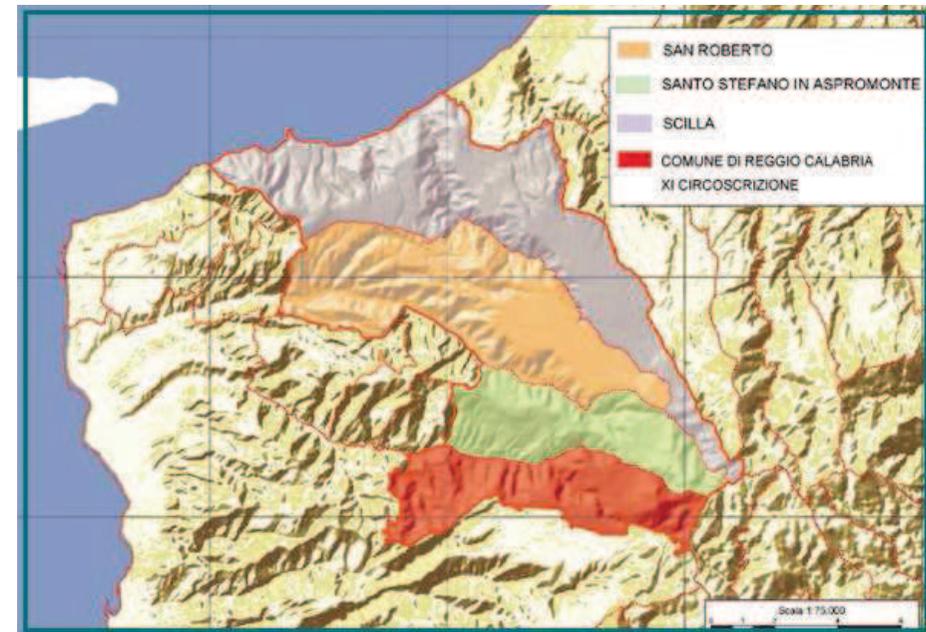

O.D.I.S.S.E.A. project

Objectives:

The project was aimed to environmental restoration, sustainable development of standpoint, the axis of tyrrhenian coast - Aspromonte included in the the municipalities of Reggio Calabria, Santo Stefano in Aspromonte, Scilla and San Roberto.

Origin of the action:

To decrease the economical and infrastructural gap of these areas, that as well generates serious repercussions on environmental compartments and depletion of biodiversity.

Target:

Local communities, that were shown sustainable examples of one sustainable development of the territory. Particularly were presented the importance of potentiality of tourism and local culture, that is often unspoken or even unknown.

MINISTERO DELL'AMBIENTE E DELLA TUTELA DEL TERRITORIO

PROVINCIA DI REGGIO CALABRIA

The good practice was implemented by the province of Reggio Calabria with financial support of Ministry of environment. As well were involved municipalities and territories that surrounds the Strait of Messina.

Process and detail content of the practice:

An environmental analysis using environmental indicators (DSIPR) was performed.

The cost of all activities, financed by the Italian Ministry of environment, were € 1,000,000.00

The effectiveness of the good practice is documented by the EMAS certification released to the municipalities of Santo Stefano in Aspromonte and Scilla. Specific study about the condition of environment was performed in the territories concerned.

Has been achieved the EMAS certification authorities

The success of the good practice is due to use it for the first time in our territory, environmental audit tool for verification of the performance of public administration.

Success factors: Involvement of local stakeholders

Difficulties encountered: Lacking co-operation of local authorities
